

## Academic Half Day Cases - Endocrinology

### Clinical Presentations: Growth

1. A 7 year old girl presents with short stature. Her parents are concerned that she has always been the smallest in her class. In clinic today, her height is 115 cm and her weight is 20 kg. Her father's reported height is 175 cm and her mother's reported height is 155 cm.
2. A 12 year old boy, who is a hockey player, presents with concerns of being short and having no signs of puberty yet. His father remembers having a late growth spurt at age 16 years and is now of average height.
3. A 5 year old girl is referred for poor growth. She has been falling off the curve for both weight and height.
4. An 8 year old boy presents for a routine assessment and is noted to have gained weight since his last visit.
5. A 6 month old girl with Trisomy 21 is referred for poor growth. Height 60 cm and weight 5 kg.
6. An 8 year old girl presents with short stature and a height of 105 cm. The family reports that she has a history of multiple otitis media and learning difficulty in math.
